

DISC Stakka®

**“With Disc Stakka,
it takes just a few
seconds to find and
eject the right disc.**

**Productivity has
really increased.”**

**Mark Moynihan,
IT Manager,
Reactive Media**

Web Designer Solves Case of the Disappearing CD!

Reactive Media, an award-winning web design company in Melbourne Australia, has implemented a simple and cost-effective solution that will prevent its archived CDs from disappearing.

Reactive has developed a new disc management strategy to archive its artwork and accounts. When completed projects are no longer stored on the server and available over the network, they are archived on to disc.

Reactive's IT Manager **Mark Moynihan**, said an Imation Disc Stakka had recently been installed and the hundred or so backup CDs that were previously stored in a big folder were being converted and saved on to DVDs, which take considerably more data.

“We've now got about 35 DVDs that have been placed into the Disc Stakka and we have automatically added their titles and content into the OpdiTracker database that

comes with the unit. This process took no time at all,” said Mark. The Disc Stakka CD & DVD Manager is a revolutionary solution that protects and manages both CDs and DVDs and the files and folders stored on them.

Disc management solution benefits

“Before using the Disc Stakka we would spend hours looking through a folder that contained about one hundred discs. Now it takes just a few seconds for the search process to find and eject the right disc, so productivity has really increased.

“A benefit of using Disc Stakka is that when any of the designers or admin people want to retrieve a disc, they must enter their name on the computer. The database shows they have taken the disc so it is easy to track it down if someone else wants it.”

When someone wants to find a particular file, it is a simple matter of typing in a keyword or phrase and the OpdiTracker software finds the disc required from the hundreds of gigabytes of stored data.

“Even replacing the disc into the unit has been streamlined,” said Mark. “When the disc is slipped into the Disc Stakka, the software provides a prompt to identify which disc is being returned. You just have to tick the right disc and nothing more has to be done. It is extremely user friendly.”

Reactive Media has installed the Disc Stakka on a standalone computer that is used to test web sites. This dual-purpose box is situated where the designers are located and everyone has access to it.

“Our new disc management strategy of having all the backup discs ‘virtually online’ and another set of discs offsite in case of an emergency is a responsible and cost efficient way to operate. It is working really well and everyone has given it two thumbs up!” he added.

www.discstakka.com

- ▼ *Each compact Imation Disc Stakka unit holds up to one hundred 12 cm discs.*
- ▼ *The bundled OpdiTracker software automatically catalogues in its database the volume, file and folder names from computer-readable CDs and DVDs.*
- ▼ *Search by name or keyword to find any file, folder or disc within seconds, and then instantly eject the required disc.*
- ▼ *Single USB connection for both power and data.*
- ▼ *Stack units five high to store 500 discs without needing additional cables or desk space.*
